Model 4253 Index Table

Technical Specifications

With over 40 years of proven reliability, the Evans Machinery Model 4253 Index Table is a great addition to any continuous laminating system. The 4253 provides for a single sheet of substrate to be laminated on both sides with no one touching the glue line. The unique design conveys the board from the glue spreader and automatically positions and drops it on the bottom sheet of laminate with a minimal amount of effort by the operator. The operator then places the top sheet on the board. Custom designed stops index the laminate to the board every time.

The 4253 can be custom fit to your specifications, so whether you are using a Hot Press, Cold Press, or a continuous laminating system the Evans Machinery Index Table can go to work for you.

A great addition to the 4253 is the 4270 Laminate Rack. Be sure to ask for more information on this labor and time saving device.

Air Requirement: 100 PSI

Max. Substrate Size: 62" X 145"

Min. Substrate Size: 9" X 27"

In Feed Height: 43"

Out Feed Height: 40"

Electrical: N/A

Hand Crank for Width Adjustment

Pneumatic Brake to Lock Width
