## Model 4800 Panel Cleaner

The Evans Machinery Model 4800 Panel Cleaner is designed to clean both top and bottom of the substrate prior to the glue spreader. Without a doubt this machine will save you time and insure dimples are no longer causing you to reject parts, a common problem when processing high gloss laminates.

The ten inch nylon brushes will give you years of trouble free, dependable service. The Model 4800 comes standard with infeed and outfeed power feed rollers equipped with cam clutch bearings to reduce excessive wear on glue spreader.
